

AutoPOD™ Calibrating Maximum H2O Time (Hot Water)

After initial start-up, the maximum H2O time must be calibrated for the H2O tank.

Step 1: Enter the program mode and scroll to the, CALIBRATE MAXIMUM H2O TIME?, menu and select YES.

CalibrateMaximum
NO H2O Time? YES

Step 2: Menu screens will scroll displaying a message !!!CAUTION!!!, CONTAINER MUST HOLD 10 OUNCES and PRESS HOT WATER TO START.

!!!CAUTION!!!

**CONTAINER MUST
HOLD 10 OUNCES**

**PRESS HOT
WATER TO START**

Step 3: Depress the Hot Water button one time and the brewer will start a timed hot water dispense. During this short time the display will scroll the, CAUTION HOT WATER, message and stop displaying the message when the dispense is finished. The screen will now say, ENTER OZ 10.0. Enter the captured ounces and press the DONE switch.

ENTER OZ : 10.0
(-) DONE (+)

Step 4: After entering the ounces collected, the machine changed the default time to the actual calibrated dispense time to deliver 10 ounces of water. The display will revert back to the original menu, CALIBRATE MAXIMUM H2O TIME?, to repeat test if needed.
